## Conventions

### 1. Use nouns but no verbs

Resource	GET (read)	POST (create)	PATCH (update)	DELETE
----------	------------	---------------	----------------	--------

Resource	GET (read)	POST (create)	PATCH (update)	DELETE
/cars	Return a list of cars	Create a new car	Bulk update of cars	Delete all cars
/cars/1	Return car id = 1	Method not allowed (405)	Update car id = 1	Delete car id = 1

Do not use verbs:

### Bad Examples!

```
/getAllCars
/createNewCar
/deleteAllCar
```

## 2. Use plural nouns

```
/cars    YES
/car     NO!!!!
```

## 3. Use sub-resources for relations

- GET /cars/711/drivers/ Returns a list of drivers for car 711.
- GET /cars/711/drivers/4 Returns driver #4 for car 711.

## 4. Provide filtering, sorting and paging for collections

### Filtering:

- GET /cars?color=red Returns a list of red cars.
- GET /cars?seats<=2 Returns a list of cars with a maximum of 2 seats

### Sorting:

Allow ascending and descending sorting over multiple fields.

```
GET /cars?sort=-manufacturer,+model
```

Returns a list of cars sorted by descending manufacturers and ascending models.

### Paging:

**Do not allow user to retrieve all the data in one request by default.** Instead, GET operations, which return a list of requested items, return only the first 25(or another value) items.

URL	Description
/cars	Return the first 25 cars
/cars?limit=10	Return the first 10 cars
/cars?offset=5	Return cars from No.6 to No. 31
/cars?offset=10&limit=5	Return cars from No.6 to No. 10

To page through all available items, use the metadata section of the JSON response to get total number of items. For example, "total": 77 means there are 77 cars in the database.

```
{
  "meta": {
    "result_set": {
      "count": 2,
      "offset": 0,
      "limit": 2,
      "total": 77
    }
  },
  "data": [
    {
      "id": "uuid1",
      "type": "car",
      "attributes": {
        "model": "Benz"
      }
    },
    {
      "id": "uuid2",
      "type": "car",
      "attributes": {
        "model": "Lamborghini"
      }
    }
  ]
}
```

**Note:** Send GET request to /cars?limit=0 to get a json that just contains metadata.

## 5. Versioning the API

Make the API Version mandatory and do not release an unversioned API. Use a simple ordinal number.

/api/v1

## 6. Handle Errors with HTTP status codes

### Useful status codes

- 200 – OK – Everything is working
- 201 – OK – New resource has been **created**
- 204 – OK – The resource was successfully **deleted**
- 304 – **Not Modified** – The client can use cached data
- 401 – **Unauthorized** – The request requires an user authentication
- 403 – **Forbidden** – The server understood the request, but is refusing it or the access is not allowed.
- 404 – **Not found** – There is no resource behind the URI.
- 500 – **Internal Server Error** – You should avoid this error. If an error occurs in the global catch block, the stracktrace should be logged and not returned as response.
- 400 – **Bad Request** – The request was invalid or cannot be served. **The exact error should be explained in the error payload.**

### Error payloads

All exceptions should be mapped in an error payload. Here is an example how a JSON payload should look like.

```
{
  "errors": [{
    "title": "This is a short human readable msg, MUST not be empty",
    "detail": "This is human readable detail msg, can be empty",
    "status": 404
  }]
}
```

## JSON Specifications

[Specifications](#)

## API

### Template

**Description:**

**Request:**

- URI

- Body

```
{  
  
}
```

### Response:

- Status Code:
- Body

```
{  
  
}
```

### Errors:

- Status Code:
- Body

```
{  
  "errors": [{  
    "title": "This is a short human readable msg, MUST not be empty",  
    "detail": "This is human readable detail msg, can be empty",  
    "status": 404  
  }]  
}
```

## Users

### 1. Registration

#### Description:

#### Request:

- URI

POST /api/v1/users/

- Body

```
{
  "data": {
    "type": "user",
    "id": "uuid",
    "attributes": {
      "email": "example@xxx.com",
      "password": "xxx"
    }
  }
}
```

### Response:

- Status Code: 201
- Body

```
{
  "data": {
    "type": "user",
    "id": "uuid",
    "attributes": {
      "email": "example@xxx.com",
      "password": "xxx"
    }
  }
}
```

### Errors:

- Email exists
- Status Code: 404
- Body:

```
{
  "errors": [{
    "title": "This email has already been registered",
    "detail": "can not insert into users,violate email unique constrain",
    "status": 404
  }]
}
```

## 2. Login

### Description:

### Request:

- URI

POST /api/v1/sessions

- Body

```
{
  "data": {
    "attributes": {
      "email": "example@xxx.com",
      "password": "xxx"
    }
  }
}
```

## Response:

- Status Code: 200
- Body

```
{
  "data": {
    "attributes": {
      "user_id": "xxx",
      "token": "xxx"
    }
  }
}
```

## Errors:

- email not registered
- Status Code: 400
- Body

```
{
  "errors": [{
    "title": "email not registered",
    "detail": "can not find email in users",
    "status": 400
  }]
}
```

- wrong password
- Status Code: 400
- Body

```
{
  "errors": [{
    "title": "email password does not match",
    "detail": "email password does not match",
    "status": 400
  }]
}
```

### 3. Get User Profiles

#### Description:

#### Request:

- URI

GET /api/v1/users/{id}

- Body

EMPTY

#### Response:

- Status Code: 200
- Body

```
{
  "data": {
    "id": "xxx",
    "type": "user",
    "attributes": {
      "username": "xxx",
      "email": "example@xxx.com",
      "phone": "1234567890",
      "credit": 100,
      "balance": 100,
      "nickname": "xxx",
      "level": 0,
      "avatar": "URL",
      "register_date": "xxx",
      "gender": 1,
      "level": 0,
      "privilege": 0
    }
  }
}
```

#### Errors:

- No such user

- Status Code: 404
- Body

```
{
  "errors": [{
    "title": "No such user",
    "detail": "No such user",
    "status": 404
  }]
}
```

- Permission denied
- Status Code: 401
- Body

```
{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}
```

## 4. Update User Profiles

### Description:

- Some information such as email, user balance **MUST** not be updated by this way!
- **Only** the fields that appears in the JSON body should be updated!

### Request:

- URI

```
PATCH /api/v1/users/{id}
```

- Body

```
{
  "data": {
    "id": "xxx",
    "type": "user",
    "attributes": {
      "username": "xxx",
      "password": "xxx",
      "phone": "1234567890",
      "credit": 100
    }
  }
}
```

## Response:

- Status Code: 200 OK
- Body

```
{
  "data": {
    "id": "xxx",
    "type": "user",
    "attributes": {
      "username": "xxx",
      "email": "example@xxx.com",
      "phone": "1234567890",
      "credit": 100,
      "balance": 100,
      "nickname": "xxx",
      "level": 0,
      "avatar": "URL"
    }
  }
}
```

## Errors:

- Permission denied
- Status Code: 401
- Body

```
{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}
```

# Pictures

## 1. Get a Picture

### Description:

### Request:

- URI

GET /api/pictures/{picture\_url}

- Body  
EMPTY

### Response:

- Status Code: 200 OK
- Body  
Binary image file

### Errors:

- Permission denied
- Status Code: 401
- Body

```
{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}
```

- File not found
- Status Code: 404
- Body

```
{
  "errors": [{
    "title": "File not found",
    "detail": "File not found",
    "status": 404
  }]
}
```

## 2. Batch Get Pictures

## Step 1

### Request:

- URI

POST /api/v1/batchasks

- Body

```
{
  "data": [
    {
      "type": "request",
      "attributes": {
        "method": "GET",
        "url": "/api/v1/pictures/{picture_url1}"
      }
    },
    {
      "type": "request",
      "attributes": {
        "method": "GET",
        "url": "/api/v1/pictures/{picture_url1}"
      }
    }
  ]
}
```

### Response:

- Status Code: 201 Created
- Body

```
{
  "data": {
    "attributes": {
      "url": "/api/v1/batchasks/{ask_id}"
    }
  }
}
```

## Step 2

### Request:

- URI

GET http://example.com/api/batchtask/{ask\_id}

- Body  
EMPTY

## Response:

- Status Code: 200 OK
- Body  
A **zip file** that contains the resources asked by user.

## ERRORS:

- Permission denied
- Status Code: 401
- Body

```
{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}
```

- File not found
- Status Code: 404
- Body

```
{
  "errors": [{
    "title": "File not found",
    "detail": "File not found",
    "status": 404
  }]
}
```

## 3. Delete a picture

### Description:

### Request:

- URI  
`DELETE /api/v1/pictures/{picture_url}`
- Body  
EMPTY

### Response:

- Status Code: 204 DELETED

- Body  
EMPTY

### Errors:

- Permission denied
- Status Code: 401
- Body

```
{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}
```

- File not found
- Status Code: 404
- Body

```
{
  "errors": [{
    "title": "File not found",
    "detail": "File not found",
    "status": 404
  }]
}
```

## Tasks

### 1. Create a Task

#### Description:

create a collection task or annotation task.

TODO: XML standard (URL of pictures,task labels)

#### Request:

- URI  
POST /api/v1/tasks

- Body

```

{
  "data": {
    "id": "uuid",
    "type": "task",
    "attributes": {
      "xml": "xxxx",
      "title": "xxx",
      "start": "xxxx",
      "end": "xxx",
      "descriptions": "xxx"
    }
  }
}

```

### Response:

- Status Code: 201 Created
- Body  
EMPTY

### Errors:

- Permission denied
- Status Code: 401
- Body

```

{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}

```

- File not found
- Status Code: 404
- Body

```

{
  "errors": [{
    "title": "File not found",
    "detail": "picture url not exists",
    "status": 404
  }]
}

```

## 2. Get Pictures Related to a Tasks

The links of the pictures should be contained in the xml file of the task.

# Commits

## 1. Upload a commit

### Description:

Finish a subtask and upload.

### Request:

- URI

POST /api/commits

- Body

```
{
  "data": {
    "id": "commit_id",
    "type": "commit",
    "attributes": [{
      "task_id": "uuid",
      "author_id": "uuid",
      "picture_url": "uuid",
      "xml": "xxx"
    }]
  }
}
```

### Response:

- Status Code: 201 CREATED
- Body  
EMPTY

### Errors:

- Permission denied
- Status Code: 401
- Body

```
{
  "errors": [{
    "title": "Please login",
    "detail": "Permission denied",
    "status": 401
  }]
}
```

## 2. Get User Commits

### Description:

### Request:

- URI

```
GET /api/commits?user={user_id}&task={task_id}
```

- Body  
EMPTY

### Response:

- Status Code: 200 OK
- Body

```
{
  "meta": {
    "total_commits": 10,
  },
  "data": [ {
    "id": "commit_id",
    "type": "commit",
    "attributes": [ {
      "task_id": "uuid",
      "author_id": "uuid",
      "picture_url": "uuid",
      "xml": "xxx"
    } ]
  } ]
}
```

### Errors:

- Commits not found
- Status Code: 404
- Body

```
{
  "errors": [ {
    "title": "You haven't take this task",
    "detail": "can not find commits of this task",
    "status": 404
  } ]
}
```
